This upper-level textbook offers an original and up-to-date introduction to issues in corporate social responsibility (CSR) from a global perspective. Written by an international team of experts, it guides students through key themes in CSR including strategy, communication, regulation and governance. Balancing critiques of CSR with a discussion of the opportunities it creates, it includes chapters devoted to critical issues such as human rights, anti-corruption, labour rights and the environment. Pedagogical features include customised case studies, study questions, key term highlighting, practitioner pieces and suggestions for further resources. The book is also complemented by a companion website featuring adaptable lecture slides, teaching notes for cases and links to related resources. Tailored for upper-level undergraduate and postgraduate courses on corporate social responsibility, sustainability and business ethics, it is also relevant to non-business courses in political science, international relations and communications.

The primary topic of the book is the relationship between the human body and the architectural and urban spaces constructed for it. Identities flow between one subject and another as warmth in a heat exchanger. Is there anything similarly valid for architecture? Is it possible for architectural rules of buildings to be assigned to the inhabitants? Can inhabitants absorb the functionality of buildings? Then, isn't the construction site the inhabitant rather than the building? Considering this, how will our stock of "building components" then develop? hands have no tears to flow... is a collection of commentaries, pictures and excerpts, quotations and "constructs" conceived around the human body. The book contains material by Ray and Charles Eames, Bernard Rudofsky, Friedrich Kiesler and other contributors. The design firm "grafisches Büro" is responsible for the bibliophilic design.

She was born to be Queen of Scotland, she was briefly the Queen of France and she had a claim to being Queen of England, which resulted in her having her head chopped off. They chopped off her head after she was found guilty of conspiring to have Queen Elizabeth (1533-1603) assassinated so that she could take power. Had she not been executed, she would eventually have become Queen of England when Elizabeth died. That was only one of the many controversies in which she was involved. Her first husband, who became the King of France, making her the Queen, died shortly thereafter and her second husband was found murdered, apparently strangled. Mary Queen of Scots (1542-1587) was believed to have been complicit in that murder. This widely acclaimed biography by Stefan Zweig is regarded as the best of the many biographies of this famous woman. The great thing about the author, Stefan Zweig, is that his biographies are smooth and easy to read. By contrast, there is a weighty tome with exactly the same title but 880 pages long. Here in 386 easy to read pages you can learn everything about Mary Queen of Scots that you will probably ever want to know.

Examines the impact of the Internet on social relationships and its implications for social justice.

Product design is characterized by a steady increase in complexity. The main focus of this book is a structural approach on complexity management. This means, system structures are considered in order to address the challenge of complexity in all aspects of product design. Structures arise from the complex dependencies of system elements. Thus, the identification of system structures provides access to the understanding of system behavior in practical applications. The book presents a methodology that enables the analysis, control and optimization of complex structures, and the applicability of domain-spanning problems. The methodology allows significant improvements on handling system complexity by creating improved system understanding on the one hand and optimizing product design that is robust for system adaptations on the other hand. Developers can thereby enhance project coordination and improve communication between team members and as a result shorten development time. The practical application of the methodology is described by means of two detailed examples.

A day by day record of the last year of the twentieth century.
