## ~~Styles and Themes | Android Developers~~

Android users expect your app to look and behave in a way that's consistent with the platform. Not only should you follow material design guidelines for visual and navigation patterns, but you should also follow quality guidelines for compatibility, performance, security, and more. The following links provide everything you need to design a high quality Android app.

## ~~Android Developers~~

A style resource defines the format and look for a UI. A style can be applied to an individual View (from within a layout file) or to an entire Activity or application (from within the manifest file). For more information about creating and applying styles, please read [Styles and Themes](#).

~~Style resource | Android Developers~~  
Android App Style Guide Styles and themes on Android allow you to separate the details of your app design from the UI structure and behavior, similar to stylesheets in web design. A style is a collection of attributes that specify the appearance for a single View.

## ~~Mobile Application Style Guide Cleveland Clinic~~

In android, the style is defined in a separate XML resource file and we can use that defined style for the Views in XML that specifies the layout. The Styles in android are similar to CSS styles in web design. Following is the example of defining a TextView control with required style attributes in an XML layout file.
