Aspnet Mvc Application Architecture  
Guidelines

5. I'm looking for some feedback on my ASP.NET MVC based CMS application architecture. Domain Model - depends on nothing but the System classes to define types. For now, mostly anemic. Repository Layer - abstracted data access, only called by the services layer. Services Layer - performs business logic on domain models.

# Acces PDF Aspnet Mvc Application Architecture

Let's understand the MVC architecture supported in ASP.NET. MVC stands for Model, View, and Controller. MVC separates an application into three components - Model, View, and Controller. Model: Model represents the shape of the data. A class in C# is used to describe a model. Model objects store data retrieved from the database. Model represents the data. View: View in MVC is a user interface. View display model data to the user and also enables them to modify them.
