In a heart-wrenching, candid autobiography, a human rights activist offers a firsthand account of war from the perspective of a former child soldier, detailing the violent civil war that wracked his native Sierra Leone and the government forces that transformed a gentle young boy into a killer as a member of the army. 75,000 first printing.

Written for the MS SQL Server developer having performance problems with SQL, this book is a comprehensive guide to the T-SQL language including case studies and examples demonstrating how to write or rewrite T-SQL source code. In addition, the author covers several ways of writing code for optimal performance and maintainability.

Written by a team of international contributors and featuring case studies from a range of educational settings in Australia, Denmark, Spain, Sweden, and the USA, this edited book is the first in the field of early childhood and youth studies to draw on Vygotsky's cultural-historical theory to give insights into transitions in childhood, what they are and how they are differently experienced. Transitions are

explored holistically so the chapters not only focus on the person transitioning but also the institutions in which the person is transitioning from and to, with a focus on schools and daycare. The contributors look at how societal values and policies impact these transitions and comparison are drawn between international settings. The book includes chapters on expatriate families, immigrant children, home-school transitions, the role of play and communities. Through interviews, case studies and the analysis of empirical material from fieldwork, *Children's Transitions in Everyday Life and Institutions* reflects on the best ways to engage children so that they may emerge as competent actors in their new settings and transition well.

Work-related stress is costly not only to employees, but also to organizations and society. For example, it is estimated that work-related stress, depression, and anxiety costs British employers £1,035 per employee and that workplace stress costs the US economy up to \$300 billion annually. However, elevated levels of stress often cannot be changed, and, if demands were not placed on employees, employee learning, organizational innovation, and societal economic growth would be hindered. Consequently, it is vital that occupational health practitioners, employees, employers and researchers strive to better understand and manage workplace stress, such that employee health and

well-being can be improved. This book can assist organizations and individuals as they encounter workplace stress. This edition highlights research done by 25 authors across 12 chapters that challenges how work stress is viewed and assessed. Additionally, a number of social and psychological influences on the stress experience are examined. Our beliefs and expectations of stress and its results, whether helpful or hurtful, can have a profound influence on our stress experiences. Also, the way that we approach our work (e.g., job crafting) or the treatment we receive from others (e.g., with dignity) can either mitigate or exacerbate any harmful or beneficial effects of stress. Moreover, how we assess the psychological (e.g., burnout and well-being) or physiological (e.g., cortisol) outcomes of stress are meaningful, and the proper diagnosis of stress (e.g., stress surveys) underlies our understanding. We hope that the findings reported in these chapters and the insights of these scholars will provide ways for you and/or your organization to improve the health and well-being of employees.

Computer-Mediated Communication Systems: Status and Evaluation synthesizes current knowledge about computerized conferencing systems, electronic mail, and office information-communication systems. It should be of interest both to students and researchers studying this

new form of electronic communication and to organizations that are planning the installation of electronic mail or other computer-mediated communication systems and that need to be aware of the information gleaned from the studies presented here. The book is organized into four main sections, focusing on the following issues:

- (1) What are the important considerations in designing software or choosing a system from the many available options and capabilities?
- (2) What factors determine whether such systems are likely to be accepted or rejected?
- (3) What are the likely impacts of such systems upon the individuals, groups, and organizations which use them? It is not the economic costs and benefits, but the social problems and "payoffs" in the form of enhanced performance and organizational efficiency that should be the main considerations in deciding whether or not to use a computer-mediated communication system.
- (4) Given the conditional nature of many of the possible impacts, no system should be implemented without formal evaluation and feedback from users to guide the implementation. The major kinds of evaluational strategies that have been successfully employed are described in this book.

This book constitutes the strictly refereed post-workshop proceedings of the First International Workshop on Information Hiding, held in Cambridge, UK, in May/June 1996, within the research programme in

computer security, cryptology and coding theory organized by the volume editor at the Isaac Newton Institute in Cambridge. Work on information hiding has been carried out over the last few years within different research communities, mostly unaware of each other's existence. The 26 papers presented define the state of the art and lay the foundation for a common terminology. This workshop is very likely to be seen at some point as one of those landmark events that mark the birth of a new scientific discipline.

Israel's 2009 invasion of Gaza was an act of aggression that killed over a thousand Palestinians and devastated the infrastructure of an already impoverished enclave. The Punishment of Gaza shows how the ground was prepared for the assault and documents its continuing effects. From 2005—the year of Gaza's "liberation"—through to 2009, Levy tracks the development of Israel policy, which has abandoned the pretense of diplomacy in favor of raw military power, the ultimate aim of which is to deny Palestinians any chance of forming their own independent state. Punished by Israel and the Quartet of international powers for the democratic election of Hamas, Gaza has been transformed into the world's largest open-air prison. From Gazan families struggling to cope with the random violence of Israel's blockade and its "targeted" assassinations, to the machinations of legal experts

and the continued connivance of the international community, every aspect of this ongoing tragedy is eloquently recorded and forensically analyzed. Levy's powerful journalism shows how the brutality at the heart of Israel's occupation of Palestine has found its most complete expression to date in the collective punishment of Gaza's residents.

Arlie Russell Hochschild's *The Time Bind* was a New York Times Notable Book.

This year's edition brings together research and essays on comparative education trends and directions written by professional and scholarly leaders in the field. Topics covered include theoretical and methodological developments, reports on research-to-practice, area studies and the diversification of comparative and international education.
