Written by an international group of contributors, Ground Improvement Case Histories: Compaction, Grouting and Geosynthetics provides over 700 pages of international case-histories. Each case-history provides an overview of the specific technology followed by applications, with some cases offering a comprehensive back-analysis through numerical modelling. Specific case-histories include: The Use of Alternative and Improved Construction Materials and Geosynthetics in Pavements, Case Histories of Embankments on Soft Soils and Stabilisation with Geosynthetics, Ground Improvement with Geotextile Reinforcements, Use of Geosynthetics to aid Construction over Soft Soils and Soil Improvement and Foundation Systems with Encased Columns and Reinforced Bearing Layers. Comprehensive analysis methods using numerical modelling methods Features over 700 pages of contributor generated case-histories from all over the world Offers field data and clear observations based on the practical aspects of the construction procedures and treatment effectiveness

TRB's National Cooperative Highway Research Program (NCHRP) Report 676: Intelligent Soil Compaction Systems explores intelligent compaction, a new method of achieving and documenting compaction requirements. Intelligent compaction uses continuous compaction-roller vibration monitoring to assess mechanistic soil properties, continuous modification/adaptation of roller vibration amplitude and frequency to ensure optimum compaction, and full-time monitoring by an integrated global positioning system to provide a complete GPS-based record of the compacted area--

This publication contains practical good practice guidance for use by site operatives and supervisors involved with street works under the New Roads and Street Works Act 1991. This guide includes relevant reference material from the code of practice "Specification for the reinstatement of openings in highways" (2002, ISBN 0115525386) which has been approved under s. 71 of the 1991 Act, but this guide is not intended as a replacement or abbreviated version of the Code. The guide covers the process from signing and excavating issues to reinstating and leaving the finished site, and for each section information is given on specification details and key tasks, as well as health and safety issues.

This volume presents papers from the 8th International Symposium on Environmental Vibration and Transportation Geodynamics (ISEV2018). It covers the latest advances in the areas of environmental vibrations, and its impact on dynamic vehicular loading, transportation infrastructures and the built environment. This volume will be of interest to policy-makers and researchers in academia, industry and government.

The Department of Transport's sixth edition of Specification for Highway Works shows the most significant developments in compaction technology over the past decade. The specification incorporates major changes including an increase in layer thickness and the acceptance of vibratory rollers.
