

## Bounds For Vix Futures Given S P 500 Smiles

When people should go to the books stores, search start by shop, shelf by shelf, it is truly problematic. This is why we give the books compilations in this website. It will unquestionably ease you to see guide **bounds for vix futures given s p 500 smiles** as you such as.

By searching the title, publisher, or authors of guide you essentially want, you can discover them rapidly. In the house, workplace, or perhaps in your method can be every best area within net connections. If you ambition to download and install the bounds for vix futures given s p 500 smiles, it is entirely easy then, since currently we extend the connect to purchase and make bargains to download and install bounds for vix futures given s p 500 smiles suitably simple!

A dual problem of minimizing/maximizing certain risk-neutral expectations is introduced and shown to yield the same value. The classical bounds for VIX futures given the smiles only use a calendar spread of log-contracts on the S&P 500. We analyze for which smiles the classical bounds are sharp and how they can be improved when they are not.

### Bounds for VIX futures given S&P 500 smiles | SpringerLink

Classical sub/superreplication of VIX futures. Replicate exactly  $V$ . 2: buy  $L(S, 2)$ , sell  $L(S, 1)$  at time 0 Classical upper bound = ? 12. Classical lower bound = 0 Concavity of the square root =>Classical upper bound is good, classical lower bound is bad. Julien Guyon Bloomberg L.P. Bounds for VIX Futures given S&P 500 Smiles

### Bounds for VIX Futures given S&P 500 Smiles

The classical bounds for VIX futures given the smiles only use a calendar spread of log-contracts on the S&P 500. We analyze for which smiles the classical bounds are sharp and how they can be improved when they are not.

### Bounds for VIX Futures given S&P 500 Smiles

We derive sharp bounds for the prices of VIX futures using the full information of S&P 500 smiles. To that end, we formulate the model-free sub/superreplication of the VIX by trading in the S&P 500 and its vanilla options as well as the forward-starting log-contracts. A dual problem of minimizing/maximizing certain risk-neutral expectations is introduced and shown to yield the same value.

The classical bounds for VIX futures given the smiles only use a calendar spread of log-contracts on the S&P 500. We analyze for which smiles the classical bounds are sharp and how they can be improved when they are not. In particular, we introduce a family of functionally generated portfolios which often improves the classical bounds while ...
