CIBSE - Building Services Knowledge According to CIBSE1, six factors directly affect thermal comfort: a person's metabolic rate and clothing level, and the air temperature, mean radiant temperature, air speed, and humidity of the space. The perception of thermal comfort may vary greatly between individuals depending on personal and environmental factors.

CIBSE - Building Services Knowledge
Overall, the study shows that the use of passive strategies can help attain adaptive thermal comfort in central London office buildings. While the temperatures achieved don't reach the established optimum for productivity of occupants, the results suggest a different approach to thermal comfort and productivity might be necessary for free-running buildings.

CIBSE - CIBSE Guides

CIBSE Guide 2015 aims to define the main criteria for design in terms of comfort and health, and to set out appropriate internal and external design conditions. Under the chairmanship of Derrick Braham, Guide A describes a logical process for engineers to deliver comfortable, productive, and low environmental impact buildings, while considering the consequences of climate change.

The comfort zone represents the combination of conditions with the same DBT and MRT for which the PMV is between -0.5 and +0.5, according to the standard. Limits of Applicability: This standard is only applicable to healthy individuals. This standard does not apply to occupants: a) whose clothing insulation exceed 1.5 clo; b) whose clothing is highly impermeable; or c) who are sleeping, reclining in contact with bedding, or able to adjust blankets or bedding.
