Contact, Care, COMMUNICATE—How Interpersonal Skills Are the Foundation of Genuine Customer Service is a quick and easy read. It helps demystify people skills by presenting interaction concepts in a straight-forward manner that most people can employ. The book pages contain real-world approaches to customer service challenges, and actionable steps for creating an outstanding service experience that will help secure customer loyalty, grow customer base and business services. This book is a compilation of the insights and observations gleaned from over 20 years of successful research, training, and consulting work in the field of customer service. Ms. Dollschnieder contends that genuine customer service is really a study and practice in human relations. The guidelines within Contact, Care, COMMUNICATE explore the best ways to optimize the human aspect of service. You ' ll be introduced to the critical Business-Service-Trust Cycle; learn effective listening techniques; come to understand the nuances of non-verbal communication; and be provided with seven steps for salvaging customer relationships when an error has been made. For those encounters with seriously angry customers, it also provides Seven Tips for Dealing Effectively with Angry or Difficult Customers. Lastly, the book contains " how to " suggestions for those businesses that want to reap the many benefits of creating an internal culture of service.

A novella set in the universe of James S. A. Corey's NYT-bestselling Expanse series, Auberón explores a new and alien world and the age-old dangers that humanity has carried with it to the stars. Now a Prime Original series. Auberón is one of the first and most important colony worlds in humanity's reach, and the new conquering faction has come to claim it. Governor Rittenaur has come to bring civilization and order to the far outpost and guarantee the wealth and power of the Empire. But Auberón already has its own history, a complex culture, and a criminal kingpin named Erich with very different plans. In a world of deceit, violence, and corruption, the greatest danger Rittenaur faces is love. The Expanse Leviathan Wakes Caliban's War Abaddon's Gate Cibola Burn Nemesis Games Babylon's Ashes Persepolis Rising Tiamat's Wrath The Expanse Short Fiction The Butcher of Anderson Station Gods of Risk The Churn The Vital Abyss Strange Dogs Auberón

An investor's guide to understanding the most elusive (yet most important) aspect of successful investing - yourself. Why is it that the investing performance of so many smart people reliably and predictably falls short? The answer is not that they know too little about the markets. In fact, they know too little about themselves. Combining the latest findings from the academic fields of behavioral finance and experimental psychology with the down-and-dirty real-world wisdom of successful investors, Drs. Richard Peterson and Frank Murtha guide both new and experienced investors through the psychological learning process necessary to achieve their financial goals. In an easy and entertaining style that masks the book ' s scientific rigor, the authors make complex scientific insights readily understandable and actionable, shattering a number of investing myths along the way. You will gain understanding of your true investing motivations,

learn to avoid the unseen forces that subvert your performance, and build your investor identity - the foundation for long-lasting investing success. Replete with humorous games, insightful self-assessments, entertaining exercises, and concrete planning tools, this book goes beyond mere education. MarketPsych: How to Manage Fear and Build Your Investor Identity functions as a psychological outfitter for your unique investing journey, providing the tools, training and equipment to help you navigate the right paths, stay on them, and see your journey through to success.

The recent emergence and widespread use of remote sensing and geographic information systems (GIS) has prompted new interest in scale as a key component of these and other geographic information technologies. Techniques for dealing explicitly with scale are now available in GIS, but, until now, very little literature was available to consider and solve specific issues of scale. With a balanced mixture of concepts, practical examples, techniques, and theory, Scale in Remote Sensing and GIS is a guide for students and users of remote sensing and GIS who must deal with the issues raised by multiple temporal and spatial scales.

-New Research concerning Rembrandt's rivals: Ferdinand Bol and Govert Flinck -Sixteen essays exploring the work of two of 17th-century Amsterdam's most ambitious painters, Govert Flinck and Ferdinand Bol -Accompanies the first ever exhibition on Flinck and Bol, to be held at The Rembrandt House Museum, Amsterdam from October 2017 to February 2018 This book presents sixteen essays exploring the work of two of 17th-century Amsterdam's most ambitious painters, Govert Flinck and Ferdinand Bol. Museum curators, academic art historians, and conservation scientists from six different countries come together to investigate form, content, and context from a variety of perspectives. Eric Jan Sluiter examines how changing patterns of patronage contributed to both artists' stylistic evolution. Hilbert Lootsma traces the rise and fall of their critical fortunes from their own time until today. Ann Jensen Adams situates their work in the shifting market for portraiture. Jasper Hillegers explores the origins of Flinck's career in the Leeuwarden studio of Lambert Jacobsz. Other authors present contextual and technical analyzes of individual paintings. Portrait identities are revealed, painterly tricks uncovered, and both artists are shown to be influential teachers and members of an intellectual community in which art and theater were closely linked. Many of these essays originated at an international conference held in preparation for the exhibition, Govert Flinck and Ferdinand Bol. Together, they shed new light on the methods and motivations of two artists who began as Rembrandt's acolytes but soon became his rivals.

A paradigm-shifting diet plan that allows you to eat anything you want, as much as you want—and still strip away 20, 40, 60 pounds, or more. After conducting extensive research at the Salk Institute and the National Institute on Aging, poring over copious amounts of new research in intermittent fasting, and engaging 2,000 people for a test panel, bestselling authors David Zinczenko and Peter Moore determined that people can lose remarkable amounts of weight eating the foods they like best—as long as they eat within a set 8-hour time period. Fasting is, of course, an ancient spiritual and health practice, but it's also a way to sidestep many of the ills of the modern world—including diabetes, heart disease, and cognitive impairment. Zinczenko and Moore demonstrate how simply observing this timed-eating strategy, even just three days a week, will reset your metabolism so that you can enter fat-burning mode first thing in the morning—and stay there all day long. And by focusing on eight critical, nutrient-rich Powerfoods, you can build in a second layer of protection against Alzheimer's, heart disease, and even the common cold. In the book, you will find motivating strategies, delicious recipes, and an 8-minute workout routine to maximize calorie burn. The 8-Hour Diet promises to strip away unwanted pounds and give you the focus and willpower you need to reach your goals for weight loss and life.

Daily, positive reminders of family love through Bil Keane's Family Circus cartoons.

Data Mining: A Tutorial-Based Primer, Second Edition provides a comprehensive introduction to data mining with a focus on model building and testing, as well as on interpreting and validating results. The text guides students to understand how data mining can be employed to solve real problems and recognize whether a data mining solution is a feasible alternative for a specific problem. Fundamental data mining strategies, techniques, and evaluation methods are presented and implemented with the help of two well-known software tools. Several new topics have been added to the second edition including an introduction to Big Data and data analytics, ROC curves, Pareto lift charts, methods for handling large-sized, streaming and imbalanced data, support vector machines, and extended coverage of textual data mining. The second edition contains tutorials for attribute selection, dealing with imbalanced data, outlier analysis, time series analysis, mining textual data, and more. The text provides in-depth coverage of RapidMiner Studio and Weka ' s Explorer interface. Both software tools are used for stepping students through the tutorials depicting the knowledge discovery process. This allows the reader maximum flexibility for their hands-on data mining experience.

The availability and performance of global navigation satellite systems (GNSS) signals at high altitude is documented as the GNSS Space Service Volume (SSV). While different definitions of the SSV exist and may continue to exist for the different service providers, within the context of this booklet it is defined as the region of space between 3,000 km and 36,000 km above the Earth's surface, which is the geostationary altitude. For space users located at low altitudes (below 3,000 km), the GNSS signal reception is similar to that for terrestrial users and can be conservatively derived from the results presented for the lower SSV in this booklet.
