She must have made an impression, because a galaxy cluster is named after her.

Now that we know where gamma rays come from, what kind of Pandora's box has been opened? Quarks normally come in groups of three (which make up protons and neutrons) or in pairs (such as the pions), so this was a big deal. A group of four quarks was a rare find indeed. But the new ...

1st sign of elusive 'triangle singularity' shows particles swapping identities in mid-flight As they collide with nuclei in our atmosphere, pions and kaons are produced, and the pions then decay into muons. These muons are similar to electrons, having a +1 or -1 charge, but with 200 ...
