This multidisciplinary book presents a critical assessment of our knowledge of chemical threats to environmental security, with special reference to prevention of chemical releases, rapid detection, risk assessment and effective management of emergency situations and long-term consequences of chemical releases. The technologies evaluated concern mainly prevention and management of both intentional and accident releases of chemicals into the environment. The book features contributors from a range of relevant scientific fields.

In a gripping memoir that reads like a spy novel, one man recounts his personal experience with Operation Phoenix, the program created to destroy the Vietcong's shadow government, which thrived in the rural communities of South Vietnam. Stuart A. Herrington was an American intelligence advisor assigned to root out the enemy in the Hau Nghia province. His two-year mission to capture or kill Communist agents operating there was made all the more difficult by local officials who were reluctant to cooperate, villagers who were too scared to talk, and VC who would not go down without a fight. Herrington developed an unexpected but intense identification with the villagers in his jurisdiction—and learned the hard way that experiencing war was profoundly different from philosophizing about it in a seminar room.

What kind of people are suicide bombers? How do they justify their actions? In this meticulously researched and sensitively written book, journalist Christoph Reuter argues that popular views of these young men and women—as crazed fanatics or brainwashed automatons—fall short of the mark. In many cases these modern-day martyrs are well-educated young adults who turn themselves into human bombs willingly and eagerly—to exact revenge on a more powerful enemy, perceived as both unjust and oppressive. Suicide assassins are determined to make a difference, for once in their lives, no matter what the cost. As Reuter's many interviews with would-be martyrs, their trainers, friends, and relatives reveal, the bombers are motivated more by how they expect to be remembered—as heroic figures—than by religion-infused visions of a blissful life to come. Reuter, who spent eight years researching the book, moves from the broken survivors of the childrens' suicide brigades in the Iran-Iraq war of the 1980s, to the war-torn Lebanon of Hezbollah, to Israeli-occupied Palestinian land, and to regions as disparate as Sri Lanka, Chechnya, and Kurdistan. He tells a disturbing story of the modern globalization of suicide bombing—orchestrated, as his own investigations have helped to establish, by the shadowy Al Qaeda network and unintentionally enabled by wrong-headed policies of Western governments. In a final, hopeful chapter, Reuter points to today's postrevolutionary, post-Khomeini Iran, where a new social environment renounces the horrific practice in the very place where it was enthusiastically embraced just decades ago.

In Tunisia with II Corps, Lt. John Randall locates a downed German plane and demolishes two live bombs still mounted on the wreckage ... In Italy, Capt. Ronald Felton's team contends with dreaded "Butterfly Bombs" left behind to menace the US 5th Army ... Landing with the 6th US Special Engineers Brigade, Capt. Jesse Donovan's squad braves deadly 88mm shells in pursuit of enemy rockets on Utah Beach ... Serving with the 9th Army Air Force in France, Capt. Thomas Reece survives a close encounter with a German landmine ... Capt. Joseph Pilcher joins in the 78th Infantry's final assault on a dam guarding the approaches to Germany ... Sweeping the 11th Airborne Division's trail on Luzon, Lt. Carl Cirocco's team is ambushed by the Japanese ... Capt. Richard Metress is dispatched to tackle enemy depth charges for the 19th Infantry Regiment on Mandog Hill ... Capt. Clifford Sarauw covers the US 10th Army's fateful landing on Okinawa ... These aforementioned exploits are among the notable events contained in *Nine from Aberdeen*, the first academic history solely devoted to the US Army's Ordnance Bomb Disposal Branch from World War II. Shortly after Pearl Harbor, nine US Army officers and sergeants were sent from Aberdeen Proving Ground to war-torn England in order to learn the invaluable technical skills pioneered by the British Royal Engineers. Led by the colorful Thomas J. Kane, these nine men inaugurated the new Ordnance Bomb Disposal School. Conceived initially for homeland defense, Col. Kane's branch eventually fielded over two hundred Army and Air Force bomb squads for overseas service. These courageous officers and men were forerunners of today's Explosive Ordnance Disposal (EOD) specialists, responsible for supporting the US military during combat operations and for preserving the lives of noncombatants at all other times. Using documents and photographs - many from personal collections - as well as oral interviews, this work presents a cross-section of US Army and Air Force operations spanning three major theaters: Mediterranean, European, and the Pacific. Special emphasis is given to the European Theater, where Col. Kane served as Gen. Eisenhower's chief ETO bomb disposal officer. *Nine from Aberdeen* also contains charts detailing campaign participations, ordnance statistics, and other significant data. Command Sergeant Major James H. Clifford (Retired), military consultant for the award-winning film, *The Hurt Locker*, provides an afterword on the continuity of modern EOD.

This field manual establishes doctrine (fundamental principles) for tactical counterinsurgency (COIN) operations at the company, battalion, and brigade level. It is based on lessons learned from historic counterinsurgencies and current operations. This manual continues the efforts of FM 3-24, *Counterinsurgency*, in combining the historic approaches to COIN with the realities of today's operational environment (OE)—an environment modified by a population explosion, urbanization, globalization, technology, the spread of religious fundamentalism, resource demand, climate change and natural disasters, and proliferation of weapons of mass destruction. This manual is generic in its geographic focus and should be used with other doctrinal sources. • Chapter 1, *Operational Environment of Counterinsurgency*, defines insurgent and counterinsurgent while using the operational variables and mission variables to describe the OE. Finally, it stresses developing a culture capability for Soldiers and leaders. • Chapter 2, *Foundations of Insurgency*, categorizes insurgent groups by their components—elements, dynamics, and strategies and their manifestations—tactics, strengths, and vulnerabilities. • Chapter 3, *Foundations of Counterinsurgency*, covers the seven lines of effort, tactical considerations, clear-hold-build operations, and counterinsurgency phases. • Chapter 4, *Planning in Counterinsurgency*, arguably the most important chapter, covers planning for tactical units during counterinsurgency operations. It also covers planning horizons and targeting. • Chapter 5, *Offensive Operations in Counterinsurgency*, addresses offensive techniques used by tactical units during counterinsurgency operations. • Chapter 6, *Defensive Operations in Counterinsurgency*, addresses defensive techniques used by tactical units during counterinsurgency operations. • Chapter 7, *Stability Operations in Counterinsurgency*, addresses stability techniques used by tactical units during counterinsurgency operations. • Chapter 8, *Working with Host Nation Security Forces*, covers the seven steps (MORTEAM) units use to train, advise, and partner with Host Nation security forces.

DIVAn investigation of the logical foundations of the theory behind Markov random processes, this text explores subprocesses, transition functions, and conditions for boundedness and continuity. 1961 edition. /div

It is increasingly recognized that the greatest risks of error in environmental analysis lie in the sample preparation rather than the analysis stage. This book describes the precautions that must be taken from the sampling to the sample pretreatment via the storage stage to assure good quality. Typical pitfalls - and recommendations for avoiding them - are discussed. Special emphasis is given to the monitoring of trace contaminants in environmental matrices (e. g., water, sediment, plants, air). This book, based on the experience of specialists, constitutes an invaluable guide to the quality assurance relevant to environmental chemists.

Get a taste of Gooseberry Patch in this collection of over 20 favorite apple recipes! The best of the best in a handy size! Apples is filled with irresistible recipes like apple orchard green beans, homemade applesauce and old-fashioned apple dumplings, plus lots of tips that feature our favorite fruit.

Scales on War is a collection of ideas, concepts and observations about contemporary war taken from over 30 years of research, writing and personal experience by retired Major General Bob Scales. The book melds Scales' unique style of writing that includes contemporary military history, current events and his philosophy of ground warfare to create a very personal and expansive view of where American defense policies are heading in the future.

The book is a collection. Each chapter addresses distinct topics that embrace tactical ground warfare, future gazing, the draft and the role of women in the infantry. His uniting thesis is that throughout its history the United States has favored a technological approach to fighting its wars and has neglected its ground forces. America's enemies have learned though the experience of battle how to defeat American technology. The consequences of a learning and adaptive enemy has been a continuous string of battlefield defeats. Scales argues that only a resurgent land force of Army and Marine small units will restore America's fighting competence.
