Gastroenteritis is inflammation of the lining of the stomach and small and large intestines. Most cases are infectious, although gastroenteritis may occur after ingestion of drugs and chemical toxins (eg, metals, plant substances). Acquisition may be foodborne, waterborne, or via person-to-person spread.

Gastroenteritis is a very common
condition that causes diarrhoea
and vomiting. It's usually caused
by a bacterial or viral tummy bug.
It affects people of all ages, but is
particularly common in young
children. Most cases in children
are caused by a virus called

Bookmark File PDF Gastro Illness Manual Guide

rotavirus. Cases in adults are usually caused by norovirus (the "winter vomiting bug") or bacterial food poisoning.

Gastroenteritis | NHS inform
The Guidelines for the investigation of gastrointestinal illness (1998), reviewed and amended in 2010, has now been updated and re-drafted to include best practice infection control recommendations and further detailed information for the investigation of sporadic cases of gastroenteritis and food or water borne outbreak investigations.

Guidelines for the investigation of gastrointestinal illness
gnawing or burning stomach pain;
feeling and being sick; feeling full
