DIY High Tunnel Components - Hoop House Construction

Our designed hoop tunnel is 240 inches (20 feet) in length and we have spaced the hoops exactly 48 inches (4 feet) apart. There are a total of 6 hoops in our design. Each hoop is made by joining two poles so the total number of poles is 12. The details of our hoop house are given in table 01.

How to Build a HOOP HOUSE - A Complete Step by Step Guide

Take one, and lay it over one end hoop of the PVC hoophouse (the 10' measurement should be vertical), such that the hoop is completely covered, but at least one foot of plastic is on the ground. Use the poly pipe clips to secure this plastic end piece to the hoop. Cut a slit down the middle to make the door.

How to Build a PVC Hoophouse for your Garden - HighTunnels.org

Affordable Commonly called hoop houses, high tunnels, or cold frames, non-engineered greenhouses are hands down the best bang for you buck when you're looking to install an enclosed growing space. These greenhouses feature sturdy steel frames and cost-effective plastic film as a covering.

Hoop Houses, High Tunnels, & Cold Frame Greenhouses ...

• Close up the all openings, including vents, louvers, and the doors. Whatever outside force is applied to the high tunnel is doubled when allowed inside the building. In essence, the wind entering the structure will attempt to force the walls and roof outwards and upwards. • Research the typical wind patterns on your property.

How To Reduce Storm Damage To Your Greenhouse and High Tunnel

A High Tunnel System, commonly called a "hoop house," is an increasingly popular conservation practice for farmers, and is available with financial assistance through the Environmental Quality Incentives Program (EQIP). With high tunnel systems, no summer is too short or winter too cold because high tunnels: Extend the growing season

High Tunnel System Initiative | NRCS

A "cold frame" hoop house is also known as a high tunnel or a Quonset house. Basically it is a common design for a polyethylene greenhouse. The frame consists of PVC pipes bent into an arc forming the trusses or ribs of the house. The PVC pipe is placed onto rebar that functions as the footer.

CONSTRUCTION - University of Wyoming

It is rare for a product to exceed expectations; the New Gothic Hoop House was the best gardening investment I made in 2014. It has held strong in spite of whipping mountain winds - up to 50mph - and heavy spring snow storms - up to 24". Thank you Carol and Loy and everyone at Lost Creek Greenhouse Systems. See my two photos below. Christopher ...
