FGF15/19 activate regulatory molecules to enter the nucleus, the center of the cell where DNA is stored, and inhibit gene expression. "This gut hormone actually acts as a breaker of insulin action,...

Gut hormones' regulation of fat production abnormal in ...

25 Most signaling molecules are not cell-permeable Steroid hormones are unusual signaling molecules: most molecules used for intercellular signaling cannot pass the plasma membrane Receptors therefore need to detect extracellular molecules, and interact with intracellular factors to transduce the signal. Any receptor for a cell-impermeable molecule must be a transmembrane protein Most ...
