Spectroscopy is the study of electromagnetic radiation and its interaction with solid, liquid, gas and plasma. It is one of the widely used analytical techniques to study the structure of atoms and molecules. The technique is also employed to obtain information about atoms and molecules as a result of their distinctive spectra. The fast-spreading field of spectroscopic applications has made a noteworthy influence on many disciplines, including energy research, chemical processing, environmental protection and medicine. This book aims to introduce students to the topic of spectroscopy. The author has avoided the mathematical aspects of the subject as far as possible; they appear in the text only when inevitable. Including topics such as time-dependent perturbation theory, laser action and applications of Group Theory in interpretation of spectra, the book offers a detailed coverage of the basic concepts and applications of spectroscopy.

This book is a study of the Anglican Reformed tradition (often inaccurately described as Calvinist) after the Restoration. Hampton sets out to revise our picture of the theological world of the later Stuart period. Arguing that the importance of the Reformed theological tradition has frequently been underestimated, his study points to a network of conforming reformed theologians which included many of the most prominent churchmen of the age. Focussing particularly on what these churchmen contributed in three hotly disputed areas of doctrine (justification, the Trinity and the divine attributes), he argues that the most significant debates in speculative theology after 1662 were the result of the Anglican Reformed resistance to the growing influence of continental Arminianism. Hampton demonstrates the strength and flexibility of the Reformed response to the developing Arminian school, and shows that the Reformed tradition remained a viable theological option for Anglicans well into the eighteenth century. This study therefore provides a significant bridge linking the Reformed writes of the Elizabethan and early Stuart periods to the Reformed Evangelicals of the eighteenth century. It also shows that, throughout its formative period, Anglicanism was not a monolithic tradition, but rather a contested ground between the competing claims of those adhering to the Church of England's Reformed doctrinal heritage and the insights of those who, to varying degrees, were prepared to explore new theological avenues.
