Energy markets are already undergoing considerable transitions to accommodate new (renewable) energy forms, new (decentral) energy players, and new system requirements, e.g. flexibility and resilience. Traditional energy markets for fossil fuels are therefore under pressure, while not-yet-mature (renewable) energy markets are emerging. As a consequence, investments in large-scale and capital intensive (traditional) energy production projects are surrounded by high uncertainty, and are difficult to hedge by private entities. Traditional energy production companies are transforming into energy service suppliers and companies aggregating numerous potential market players are emerging, while regulation and system management are playing an increasing role. To address these increasing uncertainties and complexities, economic analysis, forecasting, modeling and investment assessment require fresh approaches and views. Novel research is thus required to simulate multiple actor interplays and idiosyncratic behavior. The required approaches cannot deal only with energy supply, but need to include active demand and cover systemic aspects. Energy market transitions challenge policy-making. Market coordination failure, the removal of barriers hindering restructuring and the combination of market signals with command-and-control policy measures are some of the new aims of policies. The aim of this Special Issue is to collect research papers that address the above issues using novel methods from any adequate perspective, including economic analysis, modeling of systems, behavioral forecasting, and policy assessment. The issue will include, but is not be limited to: Local control schemes and algorithms for distributed generation systems Centralized and decentralized sustainable energy management strategies Communication architectures, protocols and properties of practical applications Topologies of distributed generation systems improving flexibility, efficiency and power quality Practical issues in the control design and implementation of distributed generation systems Energy transition studies for optimized pathway options aiming for high levels of sustainability

The Manual of Tests and Criteria contains criteria, test methods and procedures to be used for classification of dangerous goods according to the provisions of Parts 2 and 3 of the United Nations Recommendations on the Transport of Dangerous Goods, Model Regulations, as well as of chemicals presenting physical hazards according to the Globally Harmonized System of Classification and Labelling of Chemicals (GHS). As a consequence, it supplements also national or international regulations which are derived from the United Nations Recommendations on the Transport of Dangerous Goods or the GHS. At its ninth session (7 December 2018), the Committee adopted a set of amendments to the sixth revised edition of the Manual as amended by Amendment 1. This seventh revised edition takes account of these amendments. In addition, noting that the work to facilitate the use of the Manual in the context of the GHS had been completed, the Committee considered that the reference to the "Recommendations on the Transport of Dangerous Goods" in the title of the Manual was no longer appropriate, and decided that from now on, the Manual should be entitled "Manual of Tests and Criteria".

Known for his growling vocals and for the distinct poetry of his lyrics, Tom Waits has amassed over the course of three decades a devoted cult following. The *Early Years* collects the lyrics—formative and classic—from the first ten albums of this true bard of hard living. A celebration of both his words and of the artist himself, this lyrical biography charts the course from Wait's emotional debut album, *Closing Time* (1977), to the experimental stirrings in *Heartattack and Vine* (1991) and *One from the Heart* (1992). Here the words achieve a new potency, adding further dimension to this singularly gifted artist.

The beautiful Casablanca star, the world's greatest war photographer, and the secret love affair that would change their lives forever . . . in Chris Greenhalgh's *Seducing Ingrid Bergman* June 1945. When Ingrid Bergman walks into the lobby of the Ritz hotel in Paris, war photographer Robert Capa is enchanted. From the moment he slips a mischievous invitation to dinner under her door, the two find themselves helplessly attracted. Played out against the cafés and nightclubs of post-war Paris and the parties and studios of Hollywood, they pursue an intense and increasingly reckless affair. But the light-hearted Capa, who likes nothing more than to spend his mornings reading in the tub and his afternoons at the racetrack, is not all that he seems. And Ingrid offers the promise of salvation to a man haunted by the horrors of war, his father's suicide, and the death of a former lover for which he blames

himself. Addicted to risk, Capa must wrestle his devils, including gambling and drink, and resist an impulse to go off and photograph yet another war. Meanwhile, Ingrid, trapped in a passionless marriage and with a seven-year-old daughter to bring up, must court scandal and risk compromising her Hollywood career and saintly reputation if their love is to survive. With their happiness and identities at stake, both Capa and Ingrid are presented with terrible choices.

How might the anthropological study of cosmologies – the ways in which the horizons of human worlds are imagined and engaged – illuminate understandings of the contemporary world? This book addresses this question by bringing together anthropologists whose research is informed by a concern with cosmological dimensions of social life in different ethnographic settings. Its overall aim is to reaffirm the value of the cosmological frame as a continuing source of analytical insight. Attending to the novel cosmological formations that emerge in such fields as modern markets, political landscapes, digital media and popular cinema, the book's key task is to explore how modern circumstances are constituted within the variable imagination of worlds and their horizons. It will be of interest to all students and researchers in anthropology, as well as scholars in fields as diverse as film studies, cultural studies, comparative religion, science and technology studies, and broader social theory.

The essays in *Folklore Genres* represent development in folklore genre studies, diverging into literary, ethnographic, and taxonomic questions. The study as a whole is concerned with the concept of genre and with the history of genre theory. A selective bibliography provides a guide to analytical and theoretical works on the topic. The literary-oriented articles conceive of folklore forms, not as the antecedents of literary genres, but as complex, symbolically rich expressions. The ethnographically oriented articles, as well as those dealing with classification problems, reveal dimensions of folklore that are often obscured from the student reading the folklore text alone. It has long been known that the written page is but a pale reproduction of the spoken word, that a tale hardly reflects the telling. The essays in this collection lead to an understanding of the forms of oral literature as multidimensional symbols of communication and to an understanding of folklore genres as systematically related conceptual categories in culture. What kinship terms are to social structure, genre terms are to folklore. Since genres constitute recognized modes of folklore speaking, their terminology and taxonomy can play a major role in the study of culture and society. The essays were originally published in *Genre* (1969–1971); introduction, bibliography, and index have been added to this edition.
