The inner diameter of the engine cylinder is known as bore. It can be measured precisely by a Vernier calliper or bore gauge. As the engine cylinder wears out with the passage of time, so the bore diameter changes to a larger value, hence the piston becomes loose in the cylinder, and power loss occurs.

The water fuel cell is a technical design of a "perpetual motion machine" created by American Stanley Allen Meyer (August 24, 1940 – March 20, 1998). Meyer claimed that an automobile retrofitted with the device could use water as fuel instead of gasoline. Meyer's claims about his "Water Fuel Cell" and the car that it powered were found to be fraudulent by an Ohio court in 1996.

Internal combustion (IC) engines operating on fossil fuel oil provide about 25% of the world's power (about 3000 out of 13,000 million tons oil equivalent per year—see Figure 1), and in doing so, they produce about 10% of the world's greenhouse gas (GHG) emissions (). Reducing fuel consumption and emissions has been the goal of engine researchers and manufacturers for years, as can be ...
