Introduction To Time Series And

Time series is a sequence of data points in chronological sequence, most often gathered in regular intervals. Time series analysis can be applied to any variable that changes over time and generally speaking, usually data points that are closer together are more similar than those further apart. Time Series Data Components

Introduction to Time Series and Forecasting

Time series are used for : forecasting. estimating causal effects. estimating correlation over time. We ' ll define the following notations : The value of y at time t is given by y_t . The data points are : y_1, \dots, y_T . The first difference is given by : $\Delta y_t = y_t - y_{t-1}$.
