The mission of the National Institute of Standards and Technology (NIST) enables NIST to provide broad support for the advancement of U.S. manufacturing. Research and services supporting manufacturing are intended to be an important component in all of the NIST laboratories. Moreover, since manufacturing is a major part of the U.S. economy, the growth or loss of U.S. manufacturing jobs is a very important issue. Clearly, the successful execution of NIST's programs supporting manufacturing will have a significant impact on manufacturing jobs in the United States. With the multidisciplinary, multisector, and crosscutting nature of manufacturing, the Director of NIST requested that the National Research Council (NRC) assess the manufacturing-related programs at NIST in 2012. Accordingly, a panel of experts was convened by the National Research Council to perform the assessment. The Panel on review of the Manufacturing-Related Programs at the national Institute of Standards and Technology visited the NIST campus in Gaithersburg, Maryland, on March 26-28, 2012. A Review of the Manufacturing-related Programs at the National Institute of Standards and Technology: Fiscal Year 2012 contains the results of the panel's assessment. The assessment considered manufacturing research at NIST broadly, with emphasis on the specific advanced manufacturing areas: Nanomanufacturing (including Flexible Electronics); Smart Manufacturing (including Robotics); and Next-Generation Materials Measurements, Modeling, and Simulation. The area of Biomufacturing also reviewed as a subset of the Nanomanufacturing review. As is to be expected for programs covering such wide scope, the boundaries among these broad areas are not rigid and there is some overlap among them. On the basis of its assessment, the panel formed the observations and recommendations which are detailed in this report.

This book present the fundamental numerical techniques used in engineering, applied mathematics, computer science, and the physical and life sciences in a manner that is both interesting and understandable. Numerical Analysis with Applications and Algorithms includes comprehensive coverage of solving nonlinear equations of a single variable, numerical linear algebra, nonlinear functions of several variables, numerical methods for data interpolations and approximation, numerical differentiation and integration, and numerical techniques for solving differential equations. This book is useful as a reference for self study.

From the USA Today Bestselling author of The Sword of the Templars and The Aztec Heresy Some secrets are too great to bear... Retired Army Ranger Lt. Col. John Holliday has reluctantly settled into his teaching position at West Point when young Israeli archaeologist Rafi Wanounou comes to him with desperate news. Holliday's niece—and Rafi's fiancé—Peggy has been kidnapped. Holliday sets out with Rafi to find the only family he has left. But their search for Peggy will lead them to a trail of clues that spans across the globe, and into the heart of a conspiracy involving an ancient Egyptian legend and the darkest secrets of the Order of Templar Knights. Secrets that, once known, cannot be survived...
