This interdisciplinary book presents a comprehensive conceptual and methodological treatment of intervention research, a developing area of empirical inquiry that aims to make research more directly relevant and applicable to practice. Intervention Research contains original chapters by the most highly regarded scholars in the field. These experts explain how to distinguish intervention research from other modalities, demonstrate a new model of research for the design and development of interventions, and provide guidelines for conducting intervention research in practice with individuals, families, and community organizations. Providing useful observations and a wealth of ideas, authors offer conceptual schemes, results from recent design and development studies, and strategies and methodologies to help professionals make their research more usable and meaningful. Chapters cover such important topics as the acquisition of relevant knowledge, meta-analysis in intervention research, methods and issues in designing and developing interventions, and field testing and evaluating innovative practice interventions. The book depicts intervention research through case illustrations and promotes the use of new technologies for developing innovative practice methods. Intervention Research focuses on Intervention Design and Development--the part of intervention research involving the creation of reliable, practical tools of social intervention in user-ready form. It sets forth systematic procedures for designing, testing, evaluating, and refining needed social technology and for disseminating proven techniques and programs to professionals in the community. Intervention Research has a base in social work, but is highly interdisciplinary. Authors contributing to this text come from a variety of fields, including psychology, sociology, education, information science, and communications. Professors and educators working in schools of public health, education, urban planning, nursing, and public administration, or teaching courses in psychology, sociology, or upper-level social work, will find this book full of comprehensive and practical information that is advantageous for their work.

Research in Communication Sciences and Disorders: Methods for Systematic Inquiry, Fourth Edition is a comprehensive yet comprehensible text meant for instructors and students of research methods in the field of communication sciences and disorders. This forward-thinking book reflects the movement toward evidence-based practice in speech-language pathology and audiology. The authors ensure that the concepts associated with evidence-based practice are integrated throughout the chapters. Rather than treating empirical research and searching for clinical evidence as separate topics, this text presents both as different applications of a process of scientific inquiry. The order of the chapters reflects the steps a researcher or clinician might complete when conducting an investigation. Also included are features that help students be more active in learning the material. Each chapter has a set of review questions or case scenarios that can be used as homework, as probe questions in class, or as a basis for group activities. In addition, the authors provide lists of supplemental readings from the research literature in the field. New to the Fourth Edition: \* New author: Jaimie L. Gilbert for an enhanced audiology perspective \* New chapter: Writing a Literature Review \* Reorganized for better flow of information \* Various new and updated references to reflect the current state of research \* Additional illustrations and tables \* Expanded material on critical appraisal Disclaimer: Please note that ancillary content (such as documents, audio, and video, etc.) may not be included as published in the original print version of this book.
