The successful
farming of tiger

Acces PDF Litopenaeus

shrimp (Penaeus monodon) in India is mainly due to the existence of some 300 hatcheries whose capacity to produce 12,000 million postlarvae (PL) annually has provided an assured supply

Acces PDF Litopenaeus

of seed.

However, the sustainability of the sector is still hampered by many problems, foremost among these being a reliance on wild-caught broodstock whose supply is limited both in

quantity and in
seasonal
availability and
that are often
infected with
pathogens. The
current low
quality of

to infection
with white spot

a major obstacle
to achieving

region.

Considering the

production and the economic losses resulting from disease outbreaks, it is essential that the shrimp-farming sector invest in good management practices for the production of healthy and quality seed.--P

its implications
for industry in
the near future.
It offers an
introduction to

the topic and discusses the industrial application of cRASs. Around Europe, cRASs using freshwater have been developed, but to date there is little information about cRASs using the

As such, the book introduces the technical development of cRASs using the saltwater in Japan and describes measures necessary for their industrialization. It also discusses in

species, e.g.,
flounder,
pejerrey, kuruma
shrimp, white
shrimp and

have been raised
in cRASs.

Furthermore, it
presents wide
topics
concerning the

Lastly, the book
also examines
