(PDF) Maternal Adjustment to Premature Birth: Utilizing ... The purpose of this study was to ascertain whether the adjustment for primiparous mothers of preterm infants was less positive than for primiparous mothers of term infants utilizing the Roy Adaptation Model as a conceptual framework. This secondary analysis utilized data from a larger longitudinal study. The data was collected at three months post birth in the homes of the mothers.

"Maternal Adjustment to Premature Birth: Utilizing the Roy ... This article examines whether preterm newborns' behavior and their mother's adjustment to the premature birth and infant hospitalization have an influence on subsequent infant development and behavior, maternal adjustment, and mother-infant relationship. The behavioral competencies of 42 well, singleton preterm infants (mean gestational age=31 weeks) were assessed, as were their mothers' adjustment (depression and coping) and competencies (knowledge of child development).

Preterm behavior, maternal adjustment, and competencies in ... The birth of a preterm infant has been linked with parental distress and adjustment difficulties, yet little is known about the psychosocial factors contributing to this association. Using a...

Maternal adjustment following preterm birth: Contributions ... Confounders found to have the greatest impact were placenta praevia, hypertensive complications, and maternal medical history. Conclusion Even after adjustment for confounders, advanced maternal age (40 years and over) was associated with preterm birth. A maternal age of 30-34 years was associated with the lowest risk of prematurity.

Effect of maternal age on the risk of preterm birth: A ... Maternal stress during pregnancy was more common among women who delivered preterm ($p < 0.000$) compared to the control group and was still evident after adjusting for premature contractions, tobacco use, previous preterm delivery and genital tract infection (Table 4). The difference also remained in the multiple logistic regressions with the same adjustment after excluding the 24 cases of twin pregnancies from the total study population.
