A PDF version of this book is available for free in open access via the OAPEN Library platform, www.oapen.org. This book examines the emergence of both financial markets and carbon markets, and provides an in-depth investigation on the fundamental determinants of financial development.

This accessible, reader-friendly text guides you through a complete life cycle of the firm as it introduces the theories, knowledge, and corporate finance tools and techniques an entrepreneur needs to start, build, and eventually harvest a successful venture. With a strong emphasis on sound financial management practices, the text explores important issues entrepreneurs face, including how and where to obtain financing, using business cash flow models, and positioning the early-stage company strategically. You will also gain an understanding of how to interact effectively with financial institutions and regulatory agencies that can affect venture growth and enable liquidity for investors. Drawing on real-life entrepreneurial ventures and common financial scenarios, the authors include an in-depth capstone case, numerous mini-cases, and abundant examples to engage your interest and vividly illustrate key concepts such as venture capital funds, institutional investors, strategic alliances, the role of business angels, licensing agreements, and exit strategies. Trust ENTREPRENEURIAL FINANCE, Fifth Edition, to provide the skills and confidence you need for entrepreneurial success in today's markets. This book provides a view into the groundbreaking application of ethnographic tools and techniques to the understanding of undergraduate students and their use of information. The publication describes findings of the work at the University of Rochester River Campus Libraries and provides insight into how academic librarians might use these techniques on their own campuses.

Panel Data Econometrics with R provides a tutorial for using R in the field of panel data econometrics. Illustrated throughout with examples in econometrics, political science, agriculture and epidemiology, this book presents classic methodology and applications as well as more advanced topics and recent developments in this field including error component models, spatial panels and dynamic models. They have developed the software programming in R and host replicable material on the book 's accompanying website.

Despite recent advances in important aspects of the lives of girls and women, pervasive challenges remain. These challenges reflect widespread deprivations and constraints and include epidemic levels of gender-based violence and discriminatory laws and norms that prevent women from owning property, being educated, and making meaningful decisions about their own lives—such as whether and when to marry or have children. These often violate their most basic rights and are magnified and multiplied by poverty and lack of education. This groundbreaking book distills vast data and hundreds of studies to shed new light on deprivations and constraints facing the voice and agency of women and girls worldwide, and on the associated costs for individuals, families, communities, and global development. The volume presents major new findings about the patterns of constraints and overlapping deprivations and focuses on several areas key to women s empowerment: freedom from violence, sexual and reproductive health and rights, ownership of land and housing, and voice and collective action. It highlights promising reforms and interventions from around the world and lays out an urgent agenda for governments, civil society, development agencies, and other stakeholders, including a call for greater investment in data and knowledge to benchmark progress.

Aswath Damodaran, distinguished author, Professor of Finance, and David Margolis, Teaching Fellow at the NYU Stern School of Business, have delivered the newest edition of Applied Corporate Finance. This readable text provides the practical advice students and practitioners need rather than a sole concentration on debate theory, assumptions, or models. Like no other text of its kind, Applied Corporate Finance, 4th Edition applies corporate finance to real companies. It now contains six real-world core companies to study and follow. Business decisions are classified for students into three groups: investment, financing, and dividend decisions.

Optimization models play an increasingly important role in financial decisions. This is the first textbook devoted to explaining how recent advances in optimization models, methods and software can be applied to solve problems in computational finance more efficiently and accurately. Chapters discussing the theory and efficient solution methods for all major classes of optimization problems alternate with chapters illustrating their use in modeling problems of mathematical finance. The reader is guided through topics such as volatility estimation, portfolio optimization problems and constructing an index fund, using techniques such as nonlinear optimization models, quadratic programming formulations and integer programming models respectively. The book is based on Master's courses in financial engineering and comes with worked examples, exercises and case studies. It will be welcomed by applied mathematicians, operational researchers and others who work in mathematical and computational finance and who are seeking a text for self-learning or for use with courses.
