by Keeley Byrnes / Monday, September 09 2013 / Published in Excel
2013, Latest. You use formulas to perform mathematical functions on
cells. There are two basic ways of writing formulas available: “ ranged
syntax ” or “ simple syntax. ” . A “ syntax ” is simply a way of
expressing or writing something. It is important to note that these two
syntaxes are not mutually exclusive!

Microsoft Excel gives more preference to operations given in parenthesis or brackets. Then to Division followed by Multiplication, Addition, and finally Subtraction. Consider this example, here the formula entered is $(F6-F5)/F9+F8-F10$. First, the operation inside the parenthesis gets executed which means $(10-1)=9$.
