Key Message: This book aims to explain physics in a readable and interesting manner that is accessible and clear, and to teach readers by anticipating their needs and difficulties without oversimplifying. Physics is a description of reality, and thus each topic begins with concrete observations and experiences that readers can directly relate to. We then move on to the generalizations and more formal treatment of the topic. Not only does this make the material more interesting and easier to understand, but it is closer to the way physics is actually practiced. In Third Party Funding, Gian Marco Solas, for the first time, describes third party funding (TPF) as stand-alone practice within the wider litigation and legal markets. The book reports on legal issues related to TPF in both common law and civil law jurisdictions, and in the international context. It then discusses the incentives and economics of TPF transactions in different legal contexts while explaining how the practice emerged and how it is likely to develop. In addition, the book offers practical insights into TPF transactions and analyzes a number of regulatory proposals that could affect its use and desirability. This work should be read by scholars, practitioners, policymakers, and anyone else interested in how TPF is changing the practice of law.

Scientific evidence has proven that kindness changes the brain, impacts the heart and immune system, is an antidote to depression, improves relationships and even slows the ageing process. Yet, more than this, kindness can power real and lasting change in the world. This little guide shows how the practice of kindness can increase our happiness, improve our health, help us to forge stronger connections with others and positively affect the world we live in. In The Little Book of Kindness, kindness expert Dr David R Hamilton reveals the science of kindness and teaches us how, by using easy-to-follow tools, strategies and exercises, we can harness its power to improve all aspects of our lives and the lives of the people around us.

This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.
