The Faulkner Array microphone technique is a spaced pair technique that uses bi-directional, or figure-8 microphones instead of the more commonly used cardioid or omnidirectional. The two bi-directional microphones are spaced 20cm (approx. 8inch) apart. The microphones in a Faulkner Array face the same way at a 0° angle.

The Ultimate Guide to Stereo Microphone Techniques
Singing with your lips almost touching the microphone is a very good technique for the slower, more sensitive vocal. It enables you to sing a little more softly whilst not losing much volume at the mixing desk whilst taking full advantage of the proximity effect.

Good microphone technique can make a difference
Pro Tip: Any time you have microphones covering the same sound source from different distances, you're likely to run into some phase problems, as the offset in distance causes the sound to reach the microphones at different times. When in doubt, use your ears, reevaluate your mic placement, and make adjustments to get the results you want.

7 Stereo Miking Techniques You Should Try
Dynamic microphones are perfect for performance, thanks to their inherent robustness and durability. This is down to their construction, with few moving parts to go wrong. Dynamic microphones are ideal for stages, and are often seen in the hands of singers, adjacent to kick drums or propped up against guitar amp cabinets. Often, they'll feature a 'cardioid' pickup pattern, which takes audio from a single axis, i.e. the front or side of the mic.

Some podcasters like to record with the microphone in their hands. Unless holding the mic is absolutely necessary, avoid that technique. Another common microphone-stand mistake is connecting it to a surface your hands or feet easily touch. If it's a desk-mount stand, try connecting it to a nearby piece of furniture that's not touching the desk.
